

Extension Assignments:

The screenshot displays a web browser window with the Testleaf login page on the left and an AI Browser Extension for Code Generation sidebar on the right. The browser's address bar shows the URL `leaf taps.com/opentaps/control/login`. The Testleaf logo is visible at the top of the page, with the tagline "Always Ahead". The login form includes fields for Username and Password, and a Login button. A message above the form states: "The Following Errors Occurred: username was empty reenter password was empty reenter".

The AI Browser Extension sidebar is titled "AI Browser Extension for Code Generation" and contains a "Code Generator" section. The "Supported Language" is set to "Python" and the "Browser Engine" is set to "Playwright". Under "Python + Playwright Options", the checkboxes for "Use Async/Await Pattern" and "Generate requirements.txt" are both checked. The "Select LLM Provider" is set to "Groq" and the "Select Model" is set to "llama-3.3-70b-versatile". The "Groq API Key" field is present but empty. The "Settings" tab is active, showing options for "Feature File" (unchecked) and "Page Class" (checked), and a "Reset Chat" button. The "Code Generator" section displays a Python code snippet for a Playwright page class:

```
from playwright.sync_api import Page, expect

class AuthenticationPage:
    """Page Object for authentication functiona

    def __init__(self, page: Page):
        """Initialize AuthenticationPage with P
        self.page = page
        self.username_input = page.locator("inp
        self.password_input = page.locator("inp

    def fill_username(self, username: str) -> N
        """fill the username input field"""

Provide additional information
```
